Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

Sincerely,

Yvonne Steffen

Dear Federal Communications Commission,

Now is the time to build a better Internet. The iPhone has set the stage for a new generation of wireless communication, but bad policies allow companies like AT&T to chain great gadgets to closed networks. For devices like the iPhone to be truly revolutionary we need a new kind of Internet -- a network built on true wireless freedom.

The FCC must use the upcoming spectrum auction to create a truly open network that gives consumers the choice they want and gives citizens the access they need. This valuable spectrum could help millions of Americans connect to new forms of information, foster dialogue on critical civic issues, and enrich our democracy. We demand a better Internet, free from corporate gatekeepers and accessible to all Americans.
